

CUSTOMER SUPPORT TICKET PRIORITY PREDICTION AND AUTOMATED ASSIGNMENT SYSTEM USING AGENTFORCE

College name: A.R.J. College of Engineering and
Technology

Team ID: SWTID-2026-8822

Team Leader: Sakthi srineevi.T

Team Members: Asmitha.E , Shishyadharshini.S

USER STORIES

1. Customer – Create Ticket

As a customer, I want to create a support ticket with my issue details so that I can get help from the support team.

2. Customer – Track Ticket

As a customer, I want to track the status of my ticket so that I know whether my issue is being processed.

3. Support Agent – View Tickets

As a support agent, I want to view my assigned tickets so that I can resolve customer issues.

4. Support Agent – Update Ticket

As a support agent, I want to update the ticket status so that customers can know the progress of their issues.

5. System – Predict Priority

As a system, I want to analyze the ticket details and predict its priority so that urgent issues can be handled first.

INTRODUCTION

1.1 Project Overview

The Customer Support Ticket Priority Prediction and Automated Assignment System using Agentforce is an AI-powered system designed to improve the efficiency of customer support operations. The system analyzes incoming customer support tickets and predicts their priority level based on the ticket details, customer issues, and other relevant information.

Using Agentforce, the system can automatically assign tickets to the appropriate support agents based on factors such as priority, issue type, and agent availability. High-priority tickets can be identified and handled quickly, helping to reduce response time and improve customer satisfaction.

1.2 Purpose of the Project

- To automatically predict the priority of customer support tickets using AI.
- To identify high-priority and urgent customer issues quickly
- To automatically assign tickets to the appropriate support agents using Agentforce
- To reduce manual effort in ticket management.
- To improve the response and resolution time for customer issues.
- To ensure efficient handling and distribution of support tickets
- To improve the overall efficiency of the customer support team.

2.IDEATION PHASE

2.1 Problem Statement

- Customer: Customer support teams handling a large number of support tickets
- Problem: Support tickets are often prioritized and assigned manually, which can cause delays and incorrect assignment.

- Need: A system is required to automatically identify the priority of each ticket and assign it to the appropriate support agent.
- Impact: Delayed responses to urgent issues can reduce customer satisfaction and increase the workload of support teams
- Proposed Solution: Develop an AI-powered system using Agentforce to predict ticket priority and automatically assign tickets to suitable support agents.

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map Stages

- 1.Customer Identifies the Issue
- 2.Customer Submits a Support Ticket
- 3.System Analyzes the Ticket
- 4.Priority is Predicted
- 5.Ticket is Automatically Assigned
- 6.Support Agent Handles the Issue
- 7.Customer Receives the Solution
- 8.Customer Provides Feedback
- 9.Ticket is closed

4.PROJECT DESIGN PHASE

4.1Project Design Phase

- Design the overall system architecture.
- Create a customer support ticket management workflow.
- Design the ticket priority prediction process.
- Define priority levels such as High, Medium, and Low.
- Design the automated ticket assignment process using Agentforce.
- Define the criteria for assigning tickets to suitable support agents.
- Design the interaction between customers, tickets, AI prediction, and support agents.

4.2 SOLUTION ARCHITECTURE

1. Customer Layer
 - Customer submits a support ticket with issue details.
2. Ticket Management Layer
 - Salesforce stores and manages the customer ticket information.
3. AI Prediction Layer
 - AI analyzes the ticket and predicts its priority level.

4. Agentforce Automation Layer

→ Agentforce identifies the suitable support agent and automatically assigns the ticket.

5. Support Agent Layer

→ Assigned agent reviews the ticket and provides the required solution.

6. Resolution Layer

→ Ticket status is updated, resolved, and closed after successful support.

Overall Flow:

Customer → Ticket Creation → AI Priority Prediction → Agentforce Assignment → Support Agent → Resolution

5.PROJECT PLANNING & SCHEDULING

- Agile methodology
- Epics → Stories → Story Points
- Sprint-based execution
- Velocity calculation used for estimation

Sprint	Functional requirement	User task	Story point	Priority	Team member

S-1	Developer Setup	As a system administrator, I want to configure the Salesforce environment for Support Ticket Intelligence so that the support automation solution can be developed	3	High	asmitha
S-1	Data modeling	As an admin, I want to create the Support Ticket Intelligence object with required fields and relationships so that customer support ticket information is stored systematically .	5	High	Sakthi srineevi
S-1	Data modeling	As a support user, I want support tickets to be associated with Accounts and Contacts	3	High	shishyadharshini

		so that the latest customer ticket can be identified for analysis.			
S-2	Automation	As a support agent, I want an Auto-Launched Flow to retrieve the latest ticket and analyze its description so that ticket priority can be determined automatically.	5	High	asmitha
S-2	Automation	As a support agent, I want tickets to be automatically classified as High, Medium, or Low based on configured urgency conditions so that critical issues receive attention first.	5	High	shishyadharshini
S-2	Agentforce & automation	As an AI Agent (Agentforce), I want to analyze support ticket	8	High	Sakthi srineevi

		details and trigger the backend Flow so that manual ticket prioritization is reduced.			
S-3	Task& assignment	As a support manager, I want High-priority tickets to automatically create an urgent handling task and assign the appropriate support level so that critical tickets are handled quickly.	5	Medium	shsihyadharshini
S-3	SLA Management	As a support manager, I want the system to check SLA breach risk for older unresolved tickets so that potential SLA issues can be identified.	5	Medium	asmitha

S-3	Agentforce& conversational support	As a support user, I want to provide an Account Name to Agentforce and receive the ticket ID, priority, assigned agent, and action message so that I can understand the ticket handling outcome conversationally	5	Medium	Sakthi srineevi

5. Agentforce Subagent Configuration
6. Agent Action Description
7. Ticket Creation

PROJECT ROADMAP AND EXECUTION STAGES

Step 1 — Create the Custom Object

1. Go to **Setup**.
2. Open **Object Manager**.
3. Click **Create → Custom Object**.
4. Enter the object label as **Support Ticket Intelligence**.
5. Enter the required **Plural Label**.
6. Configure the required object options.
7. Click **Save**.

The screenshot displays the Salesforce Setup interface. At the top, there's a navigation bar with 'Setup', 'Home', and 'Object Manager' tabs. Below this, the 'Object Manager' section is active, showing a list of objects. The first object is 'Support Ticket Intelligence', which is a Custom Object, last modified on 10/1/2026, and is deployed. Below the list, the 'Details' page for 'Support Ticket Intelligence' is shown. The left sidebar contains a menu with options like 'Fields & Relationships', 'Page Layouts', 'Lightning Record Pages', 'Buttons, Links, and Actions', 'Compact Layouts', 'Field Sets', 'Object Limits', 'Record Types', 'Related Lookup Filters', 'Restriction Rules', 'Scoping Rules', and 'Object Access'. The main content area is titled 'Details' and includes fields for 'API Name' (Support_Ticket_Intelligence__c), 'Type' (Custom), 'Singular Label' (Support Ticket Intelligence), and 'Plural Label' (Support Ticket Intelligences). On the right side of the details page, there are checkboxes for 'Enable Reports', 'Track Activities', and 'Track Field History', and a 'Deployment Status' section showing 'Deployed'.

LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	DEPLOYED
Support Ticket Intelligence	Support_Ticket_Intelligence__c	Custom Object		10/1/2026	✓

Track Field History

Deployment Status: Deployed

Help Settings: Standard salesforce.com Help Window

Step 2 — Create Fields and Relationships

1. In **Object Manager**, open **Support Ticket Intelligence**.
2. Select **Fields & Relationships**.
3. Click **New**.
4. Select the required field type.
5. Enter the field label and other required details.
6. Click **Next** and configure field-level visibility.
7. Click **Save**.
8. Repeat the process for all required ticket fields.

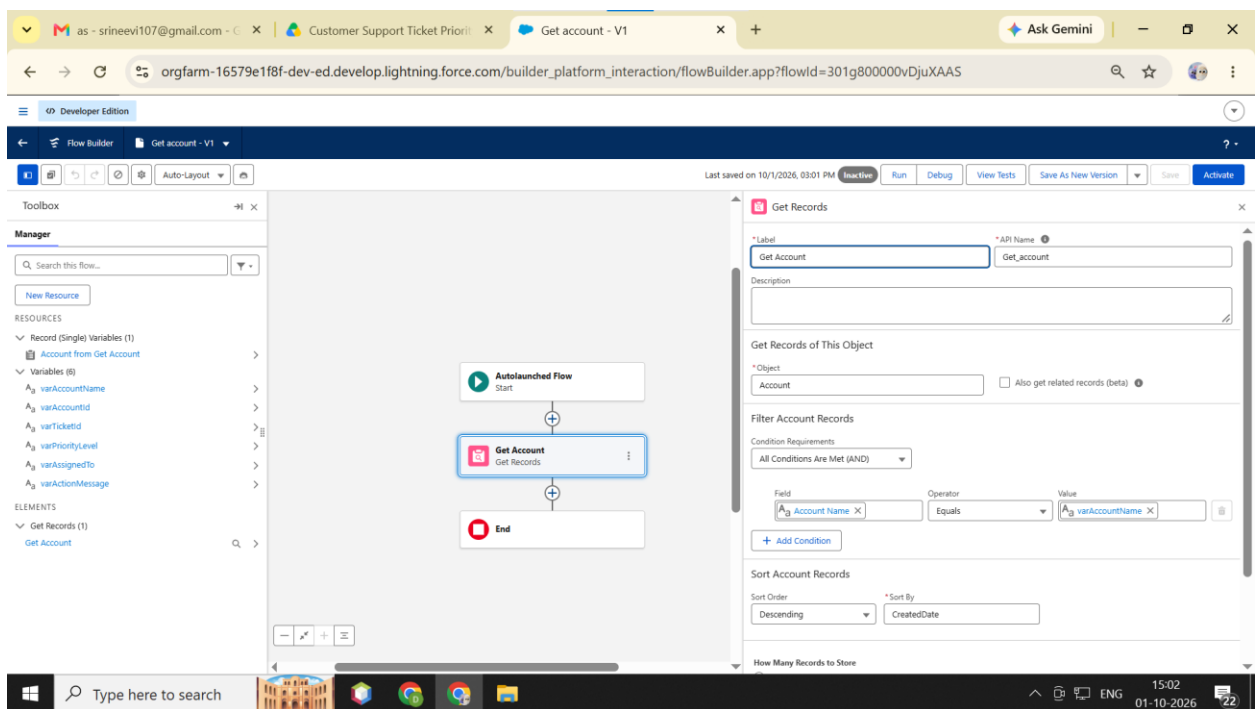

FIELD LABEL	FIELD NAME	DATA TYPE
Assigned To	Assigned_To__c	Lookup(User)
Contact	Contact__c	Lookup(Contact)
Created By	CreatedById	Lookup(User)
Created Date	Created_Date__c	Date
Customer	Customer__c	Lookup(Account)
Description	Description__c	Long Text Area(32768)
Issue Type	Issue_Type__c	Picklist
Last Modified By	LastModifiedById	Lookup(User)
Owner	OwnerId	Lookup(User,Group)
Priority Level	Priority_Level__c	Picklist

Step 3 — Create the Automation Flow

1. Open **App Launcher**.
2. Search for **Flows**.
3. Open **Flows**.
4. Click **New Flow**.
5. Select **Autolaunched Flow**.
6. Create the required **Input Variables** and **Output Variables**.
7. Add the **Get Records** element to retrieve the required Account information.

8. Store the required **Account ID** in a variable.
9. Add the required **Get Records / Assignment / Decision** elements.
10. Configure the **Label, API Name**, descriptions, operators, conditions, and outcomes for each element.
11. Configure the flow to retrieve the latest support ticket.
12. Analyze the ticket description and determine the appropriate priority.
13. Connect all elements in the correct sequence.
14. Click **Save**.
15. Test the flow.
16. Click **Activate** after successful testing.

Step 6 — Enable Agentforce

1. Open **App Launcher**.
2. Search for **Salesforce Go**.
3. Open **Salesforce Go**.
4. Search for **Agentforce**.
5. Open the relevant Agentforce setup feature.
6. Turn on **Agentforce (Default)**.
7. Complete the required setup/confirmation.

8. Verify that the Agentforce configuration is enabled.

The screenshot displays the Salesforce Go Developer Edition interface. At the top, there is a navigation bar with a hamburger menu icon, a 'Developer Edition' badge, and a 'Search Setup' field. Below this, a secondary navigation bar includes 'Setup', 'Home', and 'Object Manager' with a dropdown arrow. A 'Quick Find' search bar is positioned on the left side of the main content area. The main content area features a large blue header with the text 'Salesforce Go' and a welcome message for 'Sakthi srineevi.T'. Below the header, there are tabs for 'Home', 'Initial Setup', 'Feature Sets', 'Features', and 'My Clouds'. A search bar within the main content area contains the text 'default'. A dropdown menu is visible below the search bar, showing the results for '"default" in Salesforce Go'. The first result is 'Agentforce (Default)', which includes a description: 'Help users accomplish key tasks more productively...'. The background of the main content area shows a blurred view of the Salesforce interface.

Create an Agent Action

Connect an existing action

Actions are how an agent gets things done. To create an agent action, start with the functionality you already have in Salesforce, such as flows or prompt templates. Select an action you want the agent action to reference, and then configure it for use with an agent.

features are applied to your organization.

Create an Agent Action

An agent uses a large language model (LLM) to determine when to launch an action in a conversation. Enter instructions to tell the LLM how to use your action, inputs, and outputs. To help you get started, we copied over details from the reference action. [Learn more about how to write agent action instructions in Salesforce Help.](#)

After you create your action, you can add it to an agent and test and iterate on your instructions.

FINAL OUTPUT

7.FUNCTIONAL & PERFORMANCE TESTING

- ◆ Verify that customers can create and submit support tickets.
- ◆ Verify that all ticket details are captured correctly.
- ◆ Check whether the system predicts the correct ticket priority
- ◆ Verify the classification of tickets into High, Medium, and Low priority.
- ◆ Check whether Agentforce automatically assigns tickets to the appropriate support agent.

8. ADVANTAGES & DISADVANTAGES

ADVANTAGES

- Automatically predicts the priority of customer support tickets.
- Reduces manual effort in ticket management.
- Automatically assigns tickets to suitable support agents.
- Reduces ticket assignment errors.

DISADVANTAGES

- Initial system setup may require time and technical knowledge
- AI-based predictions may not always be completely accurate
- System performance may depend on platform availability and configuration.
- Regular monitoring and maintenance may be required.
